

BK19A - KICK-START RETURN SPRING

This kick-start spring has been developed by Veloce Spares Ltd to combat the jamming, binding and overstressing frequently experienced with currently available pattern springs. The extension to the outer end stabilises the spring in the outer end of the kick-start housing allowing it to operate concentrically without binding. Assemble as described in the Velocette handbook with the extended tang adjacent to anchor pin BK73/2. i.e fit the extension into housing first.
